Distributed Software Development

Tutorial

Develop BPEL Application Using JDeveloper

Oracle Software Download

- All related software can be downloaded from [http://
www.oracle.com/us/downloads/index.html](http://www.oracle.com/us/downloads/index.html)
- Oracle JDveloper 11g (11.1.1.7.0) download address: [http://
www.oracle.com/technetwork/developer-tools/jdev/downloads/jdeveloper11117-1917330.html](http://www.oracle.com/technetwork/developer-tools/jdev/downloads/jdeveloper11117-1917330.html)
- Oracle SOA Suite download address: [http://
www.oracle.com/technetwork/middleware/soasuite/downloads/index.html](http://www.oracle.com/technetwork/middleware/soasuite/downloads/index.html)

About Oracle JDeveloper Installation

Prerequisites

- Require JDK 6u21 / 7u10 or higher. After installing JDK, make sure you set JAVA_HOME environment variable to the install location.
- Install **Oracle JDeveloper Studio Edition 11.1.1.17** (Note: the latest version is JDeveloper 12c, but this version **does not support SOA Suite development** yet.))
- Install SOA Extension for JDeveloper 11.1.1.7.0
After installing JDeveloper, you still need to install the SOA Suite extension by opening JDeveloper and navigating the menu bar to Help > Check for Updates to install "Oracle SOA Composite Editor". Or download from <http://www.oracle.com/ocom/groups/public/@otn/documents/webcontent/156082.xml>, then navigate the menu bar to Help > Check for Updates to install from local file.

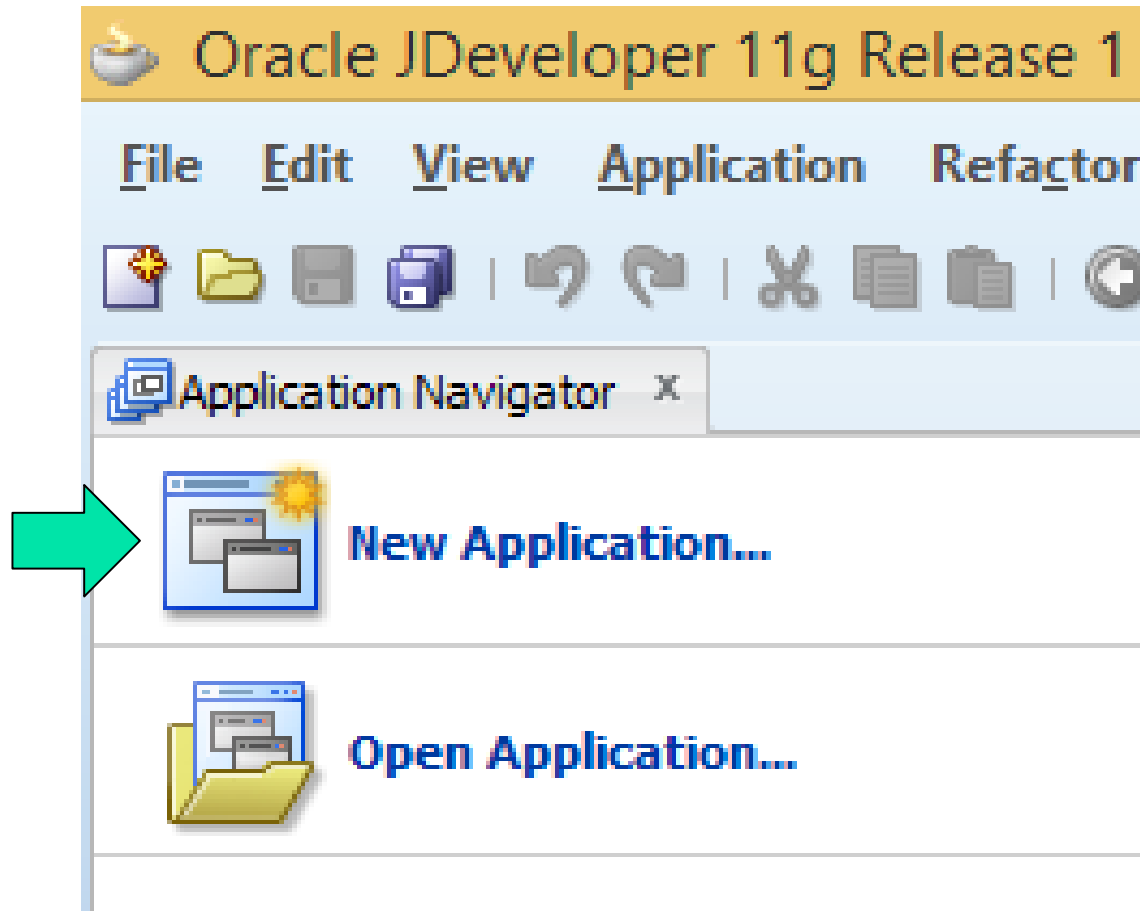

Develop BPEL Application Using JDeveloper

- **Create HelloWorld Application**
- **Configure BPEL Process**

Create HelloWorld Application

- It is an SOA application composited with BPEL process.
- The service receives any input from client, then returns “HelloWorld”.

Create New Application

Create SOA Application

Project SOA Settings

Application Package Prefix:

Application Template:

- ☐ **Java Desktop Application (ADF)**
Creates a databound rich client application. The application consists of one project for the client (ADF Swing), and another project for the ADF Model (ADF Business Components).
- ☐ **Java EE Web Application**
Creates a databound web application. The application consists of one project for the view and controller components (JSF), and another project for the data model (EJB session beans and JPA entities).
- ☒ **SOA Application**
Creates a SOA (service-oriented architecture) application. The application consists of one SOA project for the SOA composite, components, and adapters.

Completed Assign Activity

The screenshot shows the 'Edit Assign' dialog box in a BPMN editor. The dialog has several tabs: General, Copy Rules, Annotations, Documentation, Targets, Sources, and Skip Condition. The 'General' tab is selected. On the left, a tree view shows the project structure: HelloBPEL.bpel, Partner Links, Variables, and a Process. The Process contains two variables: inputVariable client:HelloBPELRequestMessage and outputVariable client:HelloBPELResponseMessage. In the center, a diagram shows a blue box representing the assign activity, with a dashed line connecting it to the output variable. On the right, a 'Variables' panel lists the same two variables. Below the variables, there is a 'client:processResponse <anonymous>' entry and a 'client:result string' entry. At the bottom, a table shows the 'From' and 'To' expressions for the assign activity. The 'From' expression is `concat('Hello ', $inputVariable.payload/client:input)` and the 'To' expression is `$outputVariable.payload/client:result`. A large green arrow points to the 'To' expression. The bottom of the dialog has buttons for Help, Apply, OK, and Cancel.

SOA Suite and BPEL Process Manager

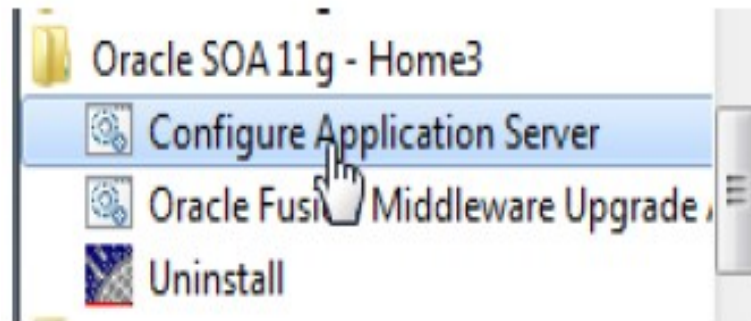

After you have developed your BPEL Process using JDeveloper, now you will use SOA Suite and BPEL Process Manager

Create a SOA Developer Domain

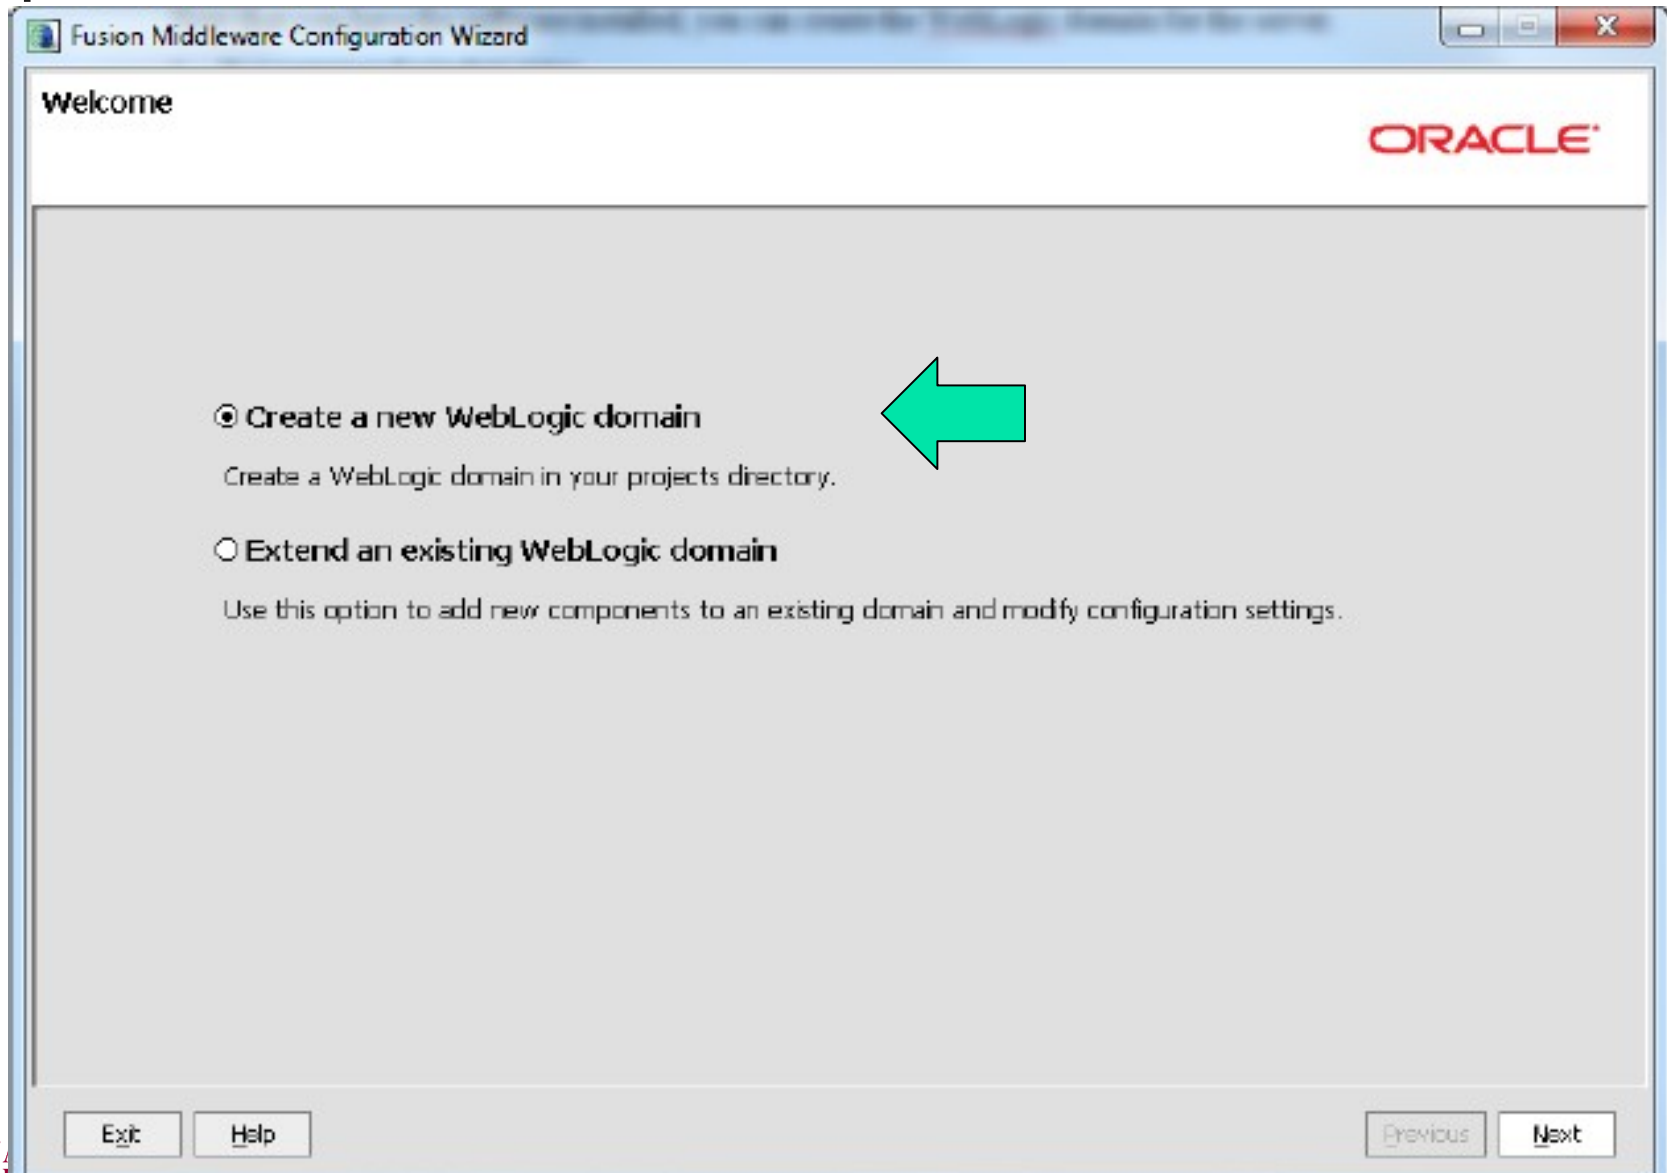

- The developer domain only includes one administration server for SOA/OSB and one managed server for BAM (if BAM is chosen).

Configure Application Server

- open the *Fusion Middleware Configuration Wizard* from the Start menu under: **Oracle SOA 11 g – Homex -> Configure Application Server**

Create a New WebLogic Domain

Select Domain Source

Fusion Middleware Configuration Wizard

Select Domain Source

ORACLE

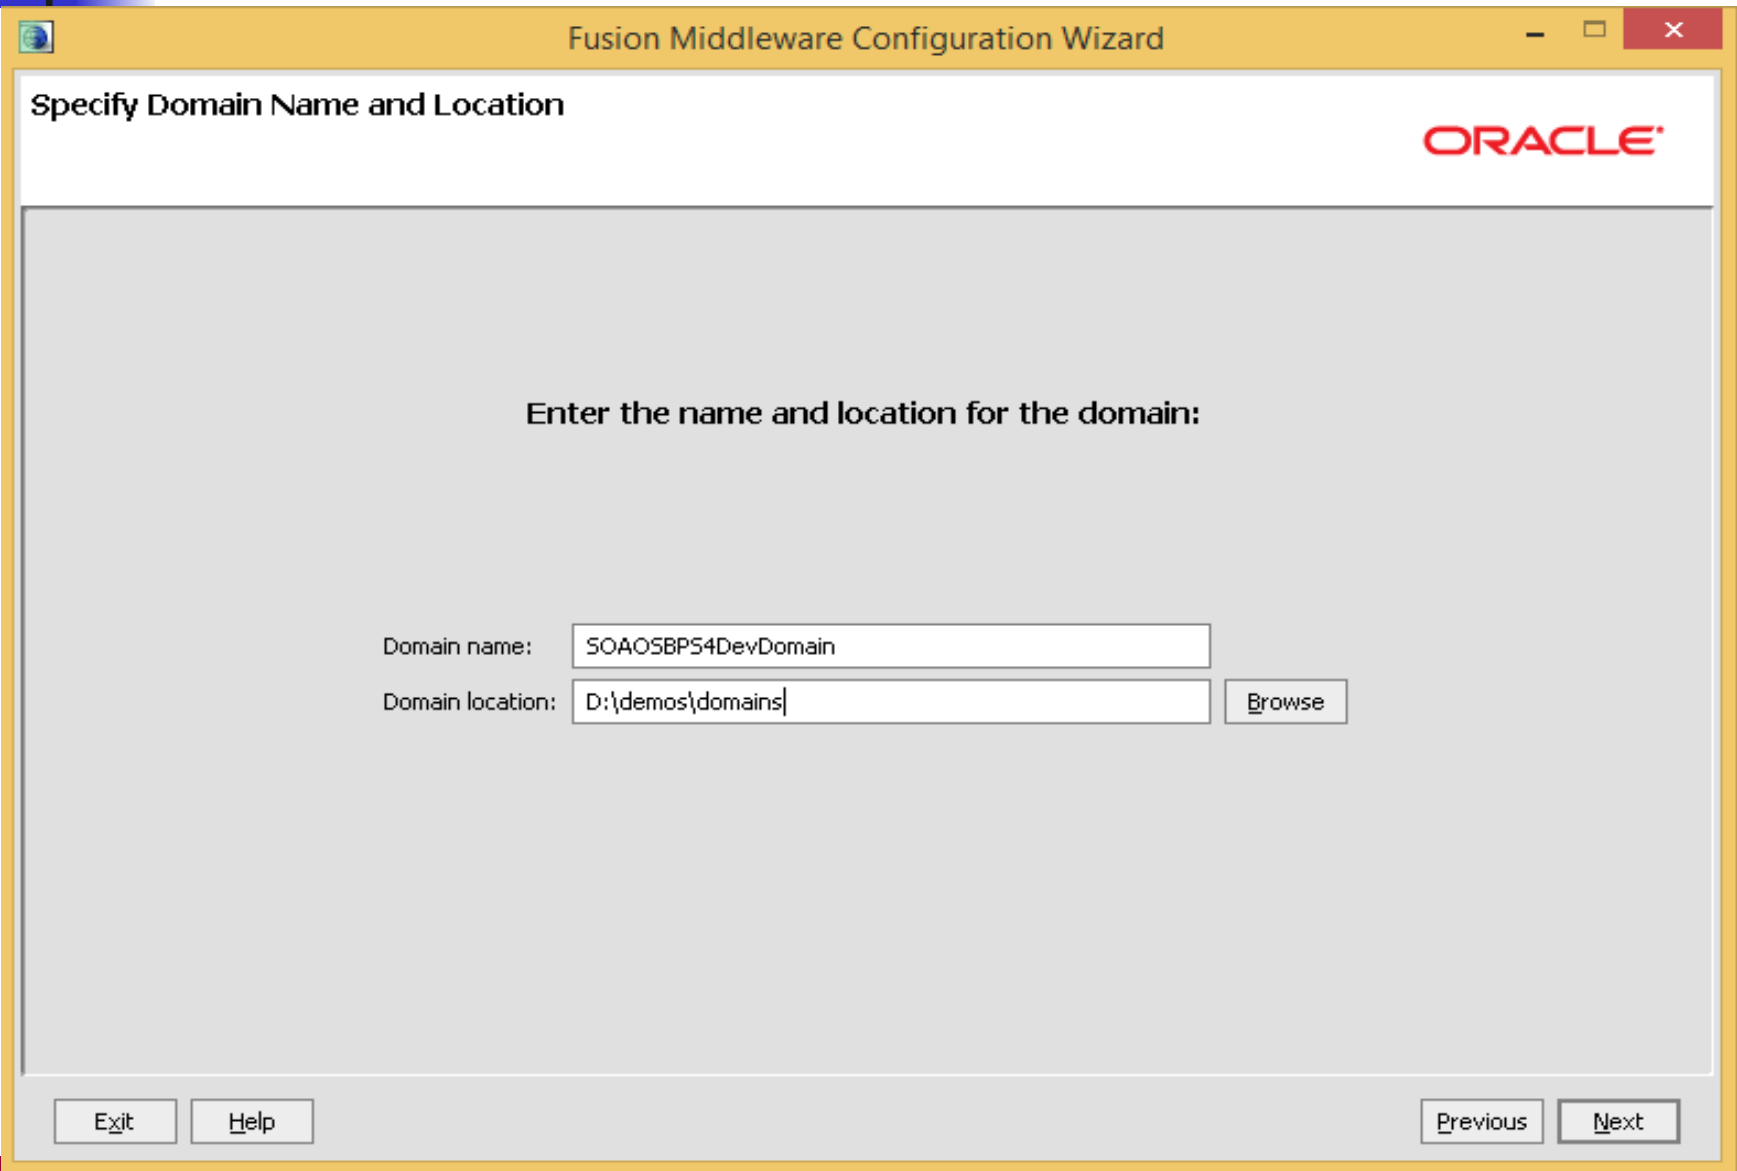

☒ **Generate a domain configured automatically to support the following products:**

- ☒ Basic WebLogic Server Domain - 10.3.4.0 [wlserver_10.3] *
- ☐ Oracle BPM Suite for developers - 11.1.1.0 [Oracle_SOA1]
- ☐ Oracle BPM Suite - 11.1.1.0 [Oracle_SOA1]
- ☒ Oracle SOA Suite for developers - 11.1.1.0 [Oracle_SOA1]
- ☐ Oracle SOA Suite - 11.1.1.0 [Oracle_SOA1]
- ☐ Oracle Service Bus OWSM Extension - 11.1.1.5 [Oracle_OSB1]
- ☒ Oracle Enterprise Manager - 11.1.1.0 [oracle_common]
- ☒ Oracle Service Bus for developers - 11.1.1.5 [Oracle_OSB1]
- ☐ Oracle Service Bus - 11.1.1.5 [Oracle_OSB1]
- ☒ WebLogic Advanced Web Services for JAX-RPC Extension - 10.3.4.0 [wlserver_10.3]
- ☐ Oracle Business Activity Monitoring - 11.1.1.0 [Oracle_SOA1]
- ☐ SOA Bridge Portlet Container - 11.1.1.0 [Oracle_SOA1]
- ☒ Oracle WSM Policy Manager - 11.1.1.0 [oracle_common]
- ☒ Oracle JRF WebServices Asynchronous services - 11.1.1.0 [oracle_common]

☐ **Base this domain on an existing template**

Template location:

Specify Domain Name and Location

The screenshot shows a window titled "Fusion Middleware Configuration Wizard" with a yellow title bar. The window contains a white header area with the text "Specify Domain Name and Location" on the left and the "ORACLE" logo on the right. The main content area is light gray and contains the instruction "Enter the name and location for the domain:". Below this, there are two input fields: "Domain name:" with the value "SOAOSBP54DevDomain" and "Domain location:" with the value "D:\demos\domains". A "Browse" button is located to the right of the "Domain location" field. At the bottom of the window, there are four buttons: "Exit", "Help", "Previous", and "Next".

Configure Server

Fusion Middleware Configuration Wizard

Configure Server Start Mode and JDK

ORACLE

Before putting your domain into production, make sure that the production environment is secure. For more information, see the topic 'Securing a Production Environment' in the WebLogic Server documentation.

WebLogic Domain Startup Mode

- ☒ **Development Mode**
Utilize boot.properties for username and password and poll for applications to deploy.
Sun JDK recommended for better startup performance during iterative development.
- ☐ **Production Mode**
Require the entry of a username and password and do not poll for applications to deploy.
WebLogic JRockit JDK recommended for better runtime performance and management.

JDK Selection

- ☒ **Available JDKs**
Sun SDK 1.7.0_51 @ C:\Program Files\Java\jdk1.7.0_51
- ☐ **Other JDK**

Configuration Summary

Configuring Oracle SOA Suite

Configuring Oracle SOA Suite may Fail After Installing Oracle WebLogic Server With IBM JDK7

After installing Oracle WebLogic Server Release 10.3 with IBM JDK7, configuring Oracle SOA Suite and Oracle Enterprise Content Management Suite might fail. This issue might also be seen when configuring Oracle Secure Backup and Oracle Web Center. The java core dump issue is noticed due to insufficient memory.

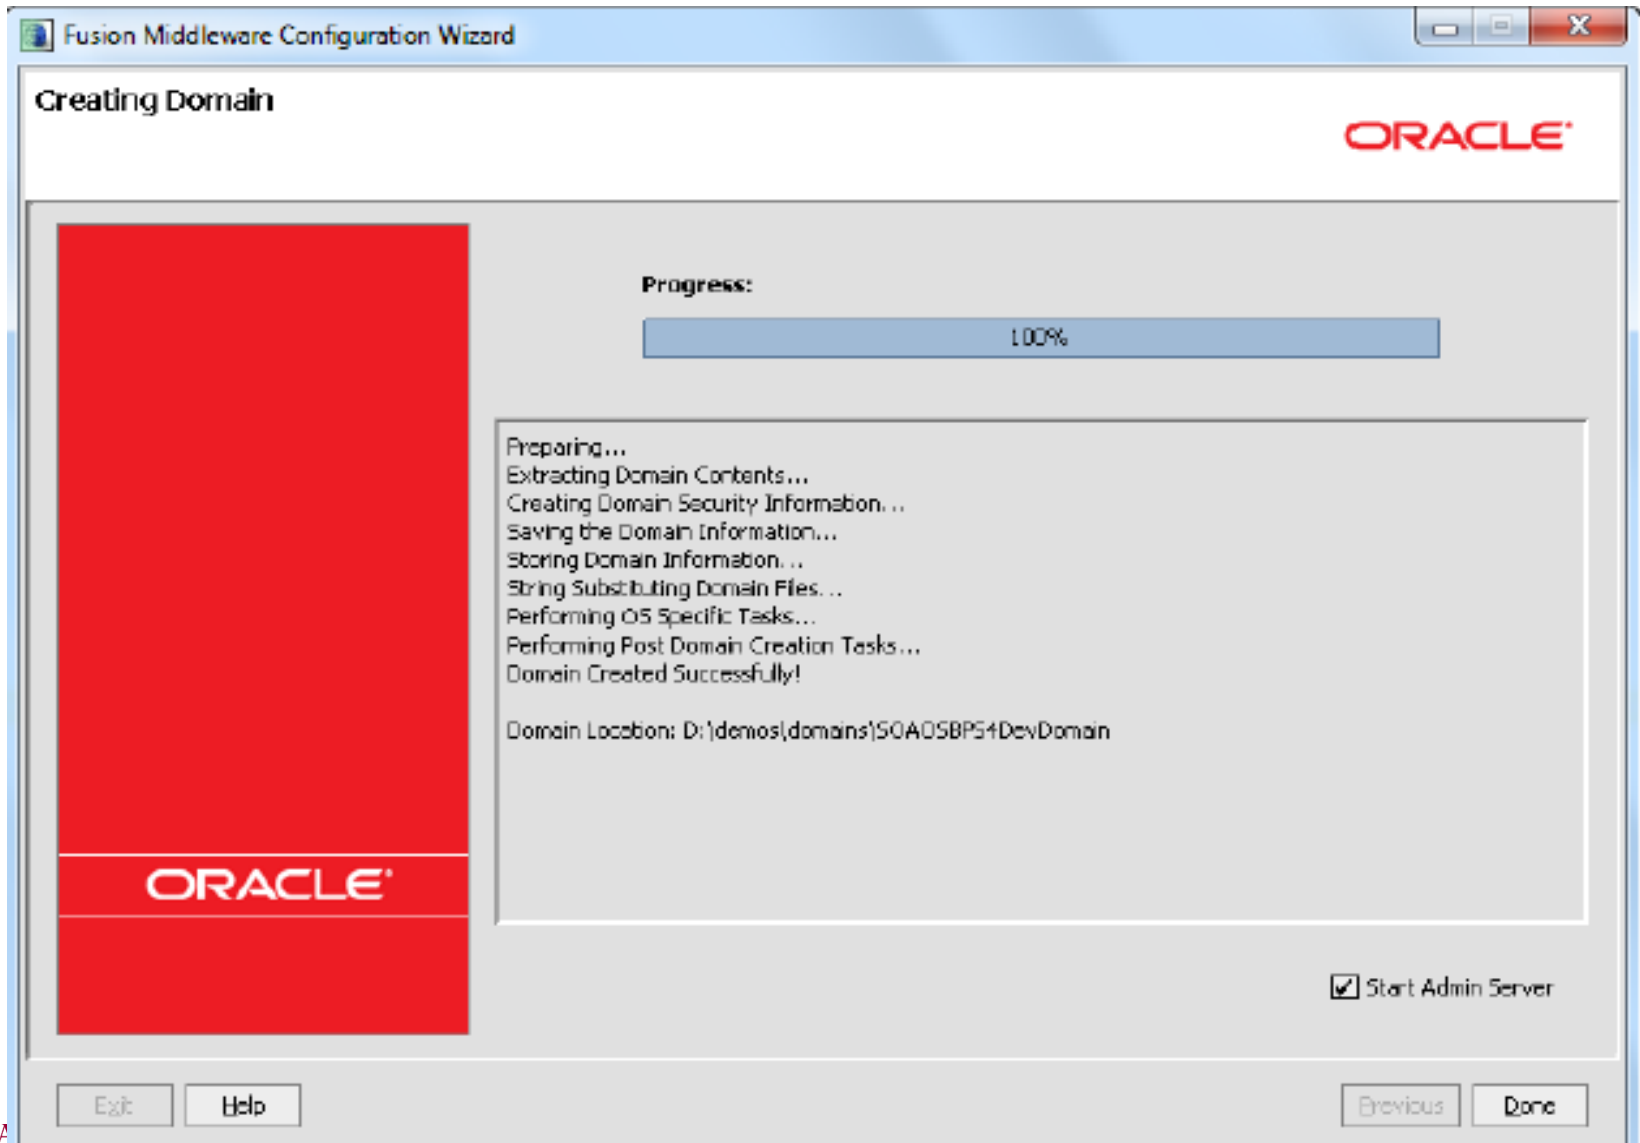

To work around this issue, perform the following steps:

1. Modify the commEnv.sh file located in the WLS_HOME/common/bin directory. Change the value for MEM_ARGS to: IBM) JAVA_VM=MEM_ARGS= *"-Xms256m -Xmx1024m -Xss512m -Xss1024m"*
2. Export JAVA_HOME and JAVA_VENDOR before configuring Oracle SOA Suite and Oracle Enterprise Content Management Suite with the following values:
3. export JAVA_HOME=IBM_JDK7_location export JAVA_VENDOR=IBM
4. Reconfigure Oracle SOA Suite and Oracle Enterprise Content Management Suite

The questions about installation, patching, and configuration can be answered in the following link:

http://docs.oracle.com/cd/E29542_01/doc.1111/e14771/install.htm

Creating Domain

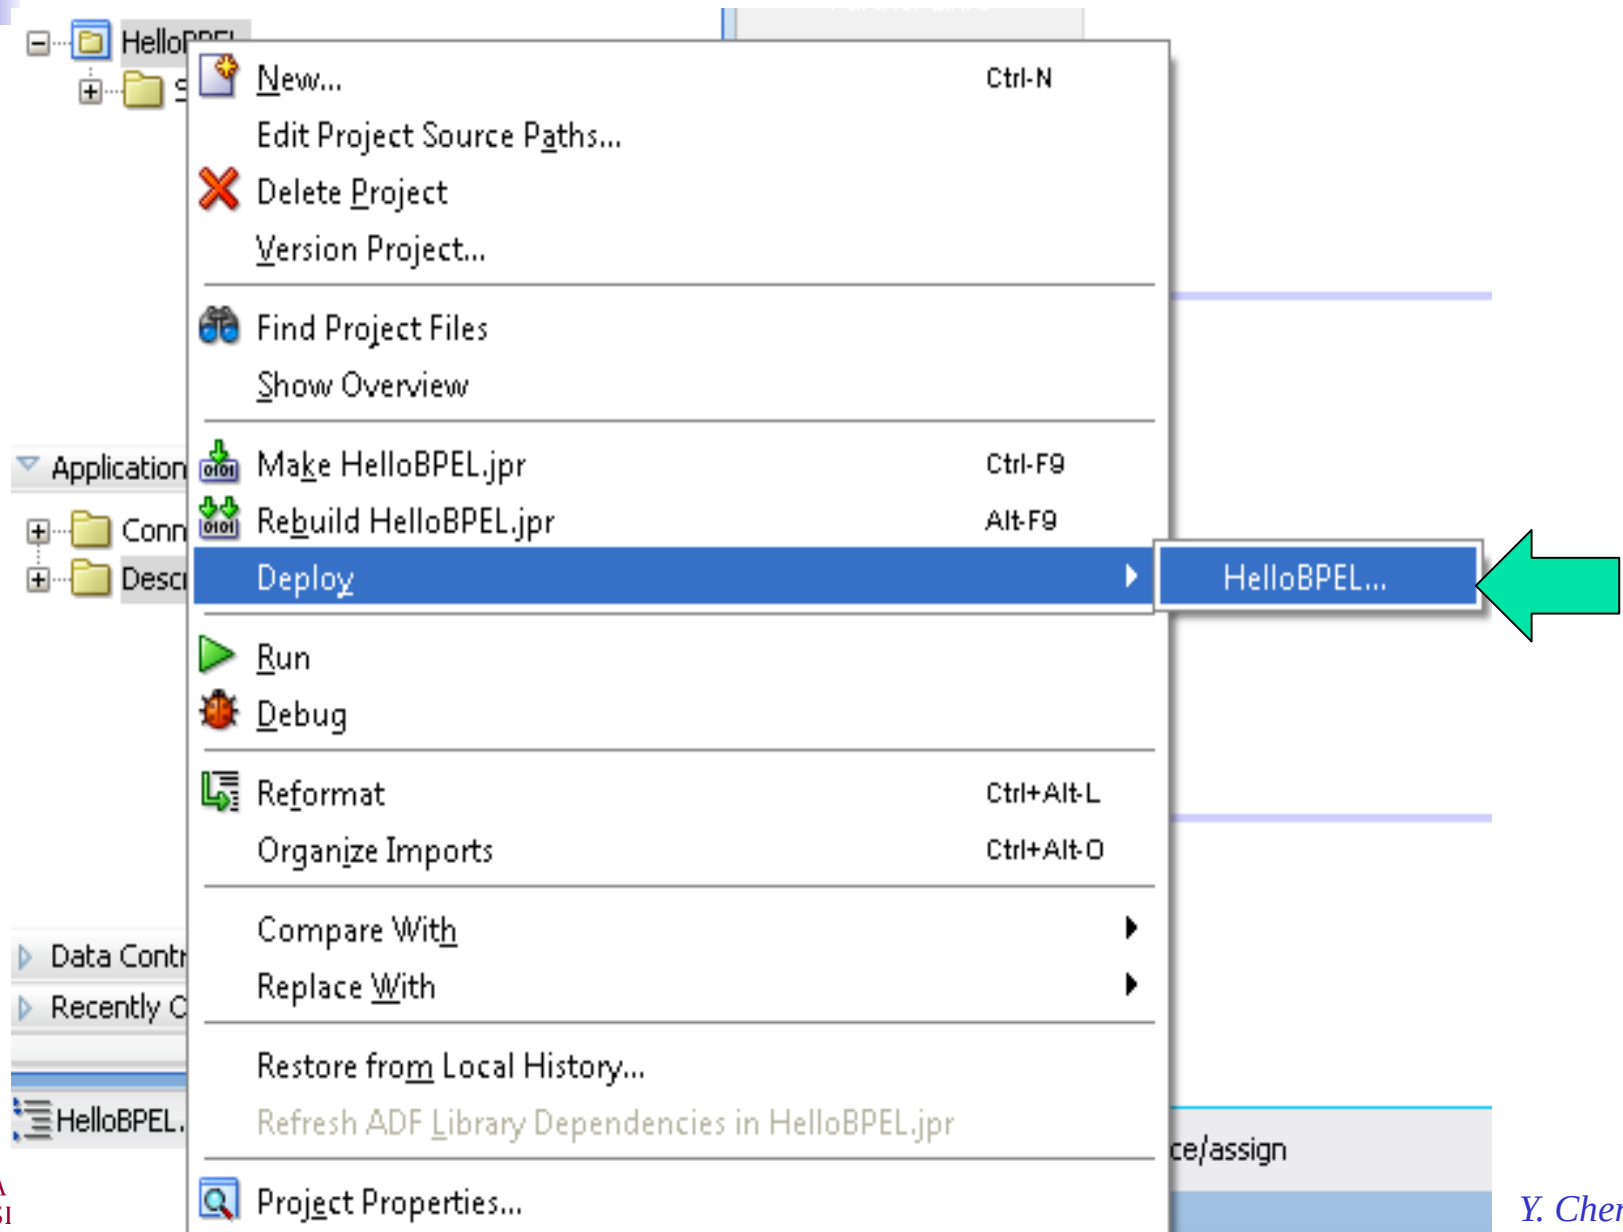

Deploy and Execute HelloWorld BPEL App

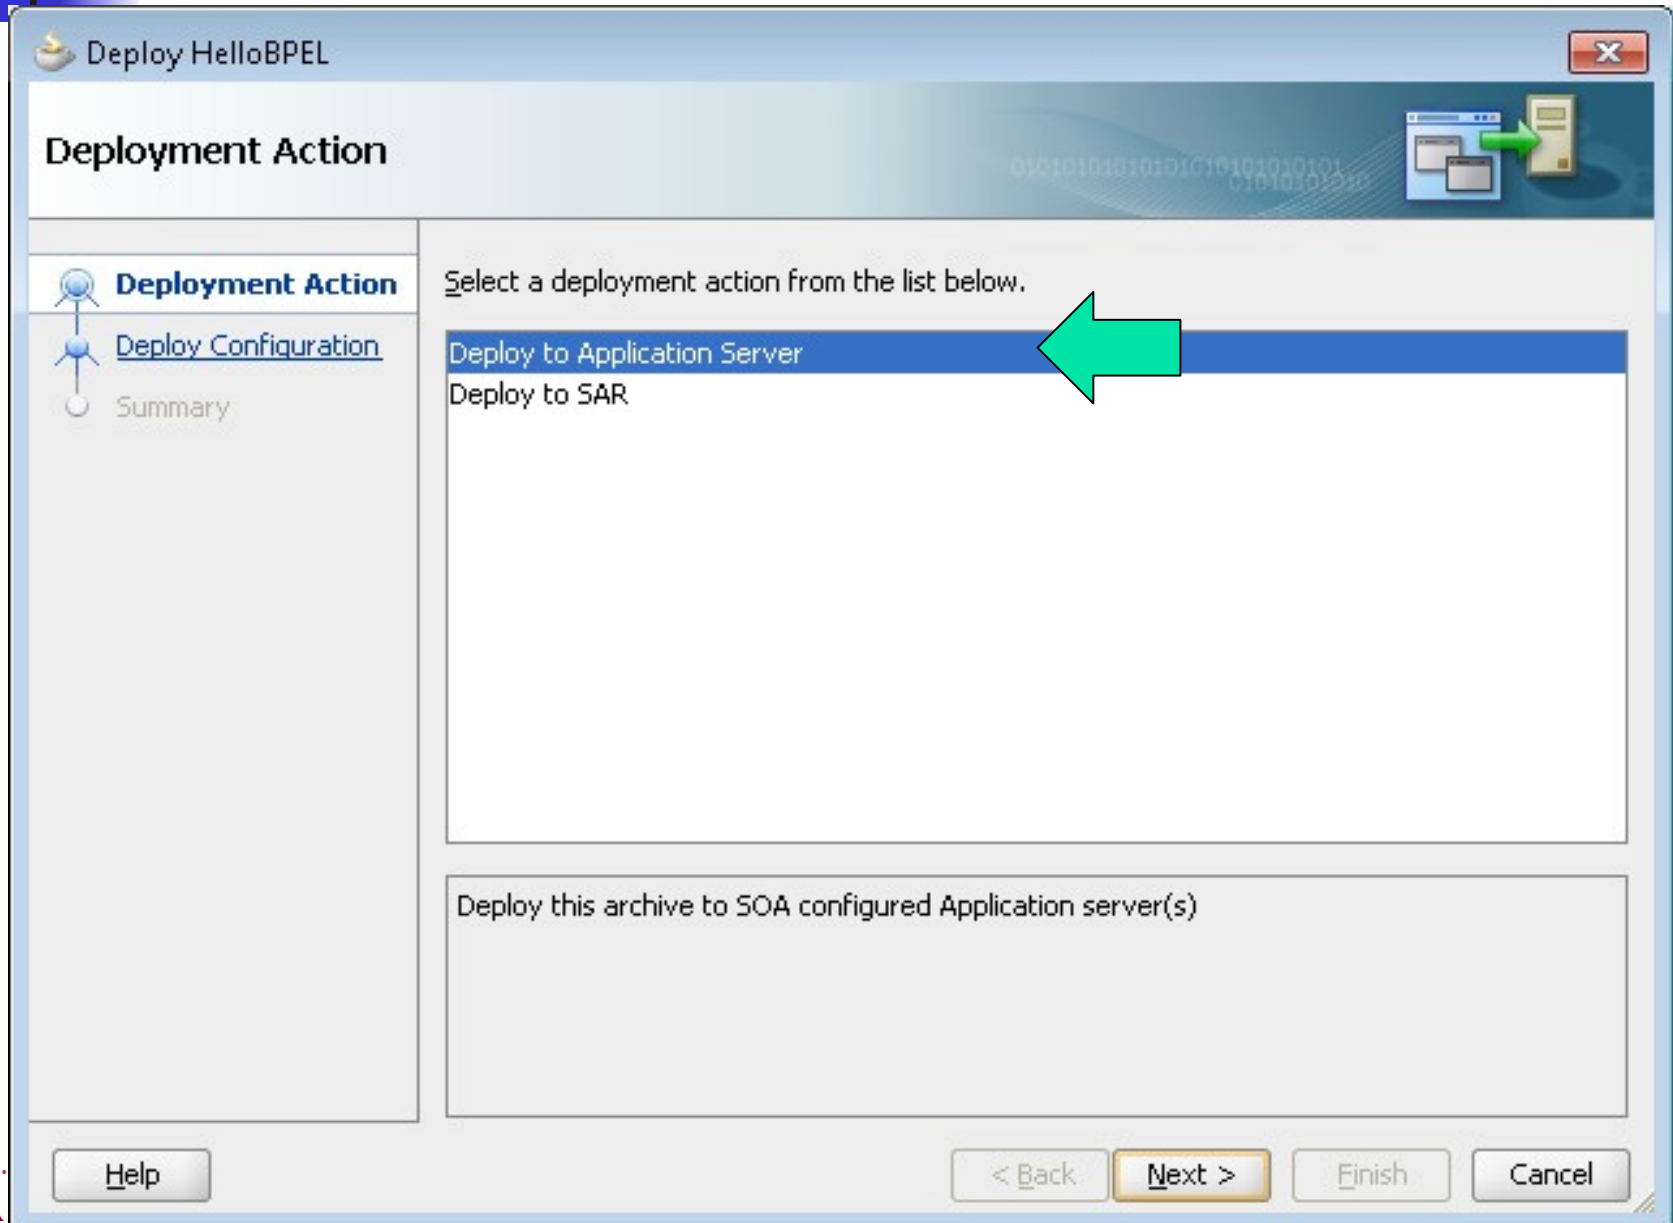

- **Deploy BPEL Process**
- **Execute BPEL Process**

Deploy BPEL Process

Right Click Project and Select Deploy

Select Deploy to Application Server

Specify Composite Deployment Options

The screenshot shows a software dialog box titled "Deploy HelloBPEL". The "Deploy Configuration" tab is active, showing settings for deploying a BPEL composite. The left sidebar contains a tree view with "Deployment Action", "Deploy Configuration", "Select Server", and "Summary". The main area has a "HelloBPEL" header and two expandable sections: "Composite Revision ID" and "SOA Configuration Plan". Under "Composite Revision ID", there are text boxes for "Project:" (HelloBPEL), "Current Revision ID:" (1.0), and "New Revision ID:" (1.0). The "SOA Configuration Plan" section is currently collapsed. Below these sections are four checkboxes: "Mark composite revision as default." (checked), "Overwrite any existing composites with the same revision ID." (checked and highlighted with a yellow border), "Keep running instances on after redeployment." (checked), and "Use the following SOA configuration plan for all composites:" (unchecked). The last option has an empty text box and a "Browse" button. At the bottom are buttons for "Help", "< Back", "Next >", "Finish", and "Cancel".

Deploy HelloBPEL

| <input checked="" type="checkbox"/>  soa_server1 | default | RUNNING | http:// |

Help < Back Next > Finish Cancel

Verify the Details and Deploy

Check the Deployment Logs for Errors

The screenshot shows a 'Deployment - Log' window with the following text:

```
[05:47:27 PM] ---- Deployment started. ----  
[05:47:27 PM] Target platform is (Weblogic 10.3).  
[05:47:27 PM] Running dependency analysis...  
[05:47:27 PM] Building...  
[05:47:36 PM] Deploying profile...  
[05:47:36 PM] Updating revision id for the SOA Project 'HelloBPEL.jpr' to '1.0'..  
[05:47:36 PM] Wrote Archive Module to  
[05:47:36 PM] Deploying sca_HelloBPEL_rev1.0.jar to partition "default" on server soa_server1  
[05:47:36 PM] Processing sar  
[05:47:36 PM] Adding sar file  
[05:47:36 PM] Preparing to send HTTP request for deployment  
[05:47:36 PM] Creating HTTP connection to host  
[05:47:36 PM] Sending internal deployment descriptor  
[05:47:36 PM] Sending archive - sca_HelloBPEL_rev1.0.jar  
[05:47:37 PM] Received HTTP response from the server, response code=200  
[05:47:37 PM] Successfully deployed archive sca_HelloBPEL_rev1.0.jar to partition "default" on server soa_server1  
[05:47:37 PM] Elapsed time for deployment: 10 seconds  
[05:47:37 PM] ---- Deployment finished. ----
```

At the bottom of the window, there is a tab bar with the following tabs: Messages, Extensions x, BPEL x, Deployment x, SOA x, and a partially visible 'Deployn' tab.

Execute BPEL Process

Login to Enterprise Manager and Select Composite Application for Testing

The screenshot displays the Oracle Enterprise Manager 11g Fusion Middleware Control interface. The left-hand navigation pane shows a tree structure with the following items: Farm, SOA Infrastructure, Topology, Farm_soa116_domain, Application Deployments, SOA, soa-infra (soa_server1), default, HelloBPEL [1.0], SimpleApproval [1.0], WebLogic Domain, Metadata Repositories, and User Messaging Service. The main content area is titled 'HelloBPEL [1.0]' and shows 'SOA Composite'. Below the title, there are statistics: 'Running Instances 0 | Total 0 | Active'. Action buttons include 'Retire ...', 'Shut Down...', 'Test', and 'Settings...'. A tabbed interface at the bottom includes 'Dashboard', 'Instances', 'Faults and Rejected Messages', 'Unit Tests', 'Policies', and 'Test Service'. The 'Instances' tab is active, showing a section for 'Recent Instances' with a table header: 'Instance ID', 'Name', 'Conversation ID', and 'Instance State'. The table content states 'No composite instances found.' and includes a 'Show All' link. Below this is a section for 'Recent Faults and Rejected Messages'.
